Version 4.4 Software Upgrade

P3ProSwing is proud to announce the release of version 4.4 of their Swing Analysis Software. Included in this release are the following updates (based on version 4.3):

- Improved Launch Angle calculations
- Ability to select Cover Type (which auto-adjusts the sweet spot indication)
- Improved chipping within the Virtual Course Software

This is a **FREE** downloadable upgrade* to all customers.

* **NOTE:** If you have a version older than 4.0, you will lose functionality if you download and install this version as version 4.0 and above requires a security device. The following is a list of functionalities requiring a security dongle:

- Practice Course
- Course Game
- Highlands National Course & Desert Dunes Course
- Closest-to-Pin, Hole-in-One & Longest Drive
- Launch Angle (sold separate from any upgrades)
- Vector/AccuSport Integration (sold separate from any upgrades)

NOTE: If you do not have a security dongle, you will lose all of the above. If you have a security dongle, the items currently programmed on that dongle will work without issue.

NOTE: It is imperative that you do a full uninstall of the software prior to installing any new software version. To properly uninstall the software, you should backup all swings files (.p3p files) and swing folders (which contain your video capture files). Once you have completed your backup, you should follow the instructions here (https://p3proswing.freshdesk.com/solution/categories/28958/folders/46576/articles/24132-uninstall-and-reinstall-procedure).
